Disability-Inclusive Clinical Research Accommodation Planning Form

Identify and plan access needs for a research procedure without requiring unnecessary disability or diagnostic disclosure. Complete only fields relevant to the study and participant.

Before the procedure, confirm how the participant can request a pause, modification, assistance, or stop. An accommodation request should not by itself be treated as a reason for exclusion; safety and scientific requirements still apply.

Access needs and planning

Participant / study ID (avoid unnecessary personal information)

Preferred communication method(s)

Study activity, visit, procedure, or technology involved

Access need or barrier identified

Accommodation requested or proposed

Participant preference or comments

Safety, protocol, or measurement considerations

Implementation record

Accommodation agreed / action to be taken Responsible study team member / role Date or study stage for review / testing

Implementation result: What happened when the accommodation was used?

Participant response / accessibility feedback Effect on data collection or interpretation, if any Resulting protocol, technology, material, or training modification Follow-up status (select all that apply)☐ One-time accommodation☐ Adopted as ongoing improvement☐ Further review needed

Barrier → Accommodation → Participant Response → Design Modification: Use this record to identify recurring barriers and decide whether a one-time accommodation should become a standard protocol, technology, material, or staff-training improvement.

Part of NeuroViu’s Disability-Inclusive Accessibility Framework (v1.0). Adapt to institutional policy, approved protocols, participant populations, and applicable ethics or legal requirements.
